PROFESSIONAL SUMMARY

Data Engineer with **1+ year of professional experience** designing, developing and optimizing scalable **ETL/ELT data pipelines, cloud data platforms** and analytics solutions across **Microsoft Azure** and **Google Cloud Platform (GCP)**. Hands-on experience with **data ingestion, data transformation, data modelling, data migration, data quality and performance optimization, visualization, processing 10+ GB of data daily**. Recently **completed an MSc in Artificial Intelligence**, with practical experience in **Machine Learning, Natural Language Processing, Large Language Models** and **AI-powered applications**, combining data engineering with **advanced analytics and AI**.

TECHNICAL SKILLS

Languages & Databases: Python, Scala, Java, JavaScript, HTML, CSS, MySQL, MongoDB, Cosmos, Cassandra
Data Engineering: Apache Spark, PySpark, Scala Spark, Airflow, Azure Data Factory, Databricks, Synapse, Azure Cosmos, Extract Transform Load, Extract Load Transform, Hadoop, Hive, BigQuery, relational databases, Datalake, Deltalake
Cloud & Databases: Microsoft Azure, basic GCP
AI/ML & Analytics: LLMs, NLP, Deep Learning, Machine Learning, GenAI, AI Powered Applications
Development & Tools: Git, GitHub, Docker, Jira, Software Engineering, Full stack development, Agile Methodologies

PROFESSIONAL EXPERIENCE

Software Engineer (Data Engineer) |*UST Global, Trivandrum, India* **Jun 2024 – Jun 2025**

- Engineered and maintained automated **ETL data pipelines using Apache Airflow and GCP**, processing 10+ GB of production data daily across **6 downstream systems**.
- Optimized **PySpark transformation** workflows on **Azure Databricks, shrinking processing latency by 20%** and **trimming** nightly batch **runtime by 45 minutes**.
- Architected relational data models spanning **Cosmos DB** and **Microsoft SQL Server**, tuning 30+ complex queries and **lowering average query time by 25%**.
- Deployed **scalable data engineering pipelines** supporting business intelligence dashboards used by stakeholders.

Data Analyst Intern |*KWYK PVT LTD, Pune, India* **Mar 2022 – Jun 2022**

- **Migrated relational tables** from **Azure SQL to Cosmos DB** across 8 schemas, **preserving 100% data integrity** throughout the 3-month transition.
- **Automated data pipelines** with **Azure Data Factory and Azure Databricks, raising** processing **efficiency by 40%** for 5 daily workflows.

TECHNICAL PROJECTS

Airbnb Insight Vault — Cloud Data Pipeline *Azure, PySpark, Databricks*

- Designed a Medallion Architecture with different layers across Azure Data Lake and Cosmos DB, ingesting 2M+ records.
- Launched Databricks SQL dashboards visualizing market trends for 5 metro regions, slashing reporting time by 35%.
- Generated SQL-based analytics views enabling 3x faster exploration of large-scale cloud datasets.

CLH Gen - LLM-Powered Cover Letter Platform *Next.js, LLM APIs, Prompt Engineering*

- Designed and shipped a full-stack AI application that bridges resumes and job descriptions using advanced LLM prompts, featuring a custom "human-touch" filter to produce ATS-optimised content that avoids AI detection patterns.
- Integrated PDF generation with dynamic content tuning based on user inputs; deployed publicly with zero-auth access.

Fact Checker - Heteregeneous ensemble *ML, DL, LLMs, Prompt Engineering*

- Designed and implemented a heterogeneous ensemble framework integrating four large language models (Gemma, Qwen, Mistral, DeepSeek), a Graph Neural Network, and a Gradient Boosting classifier for automated fact verification.
- Improved fake news detection accuracy by 3.08% through a weighted voting mechanism calibrated on individual model performance, achieving 94.05% ensemble accuracy on the ISOT dataset.
- Conducted a systematic prompt engineering study on Gemma 9B, demonstrating a 6.03% accuracy gain by increasing prompt strictness, while analysing diminishing returns beyond medium strictness.

EDUCATION

M.Sc. in Artificial Intelligence (1:1) **Sep 2025 – Jun 2026**
Munster Technological University, Cork, Ireland | *Key Modules: Big Data, NLP, LLMs, Deep Learning, Metaheuristics*
B.Tech. in Computer Science (9.01 CGPA) **Jul 2019 – Jun 2023**
MIT World Peace University, Pune, India | *A+ grade in Data Warehousing and Data Modelling, Big Data Analytics and Distributed Computing*

CERTIFICATIONS

GCP for Data Engineering (Oct '24) | Airflow Management (Mar '25) | Spark with Scala (Aug '24) | Cassandra (Nov '24)
